

Leo Evans
Pharmacist

Leo Evans: Since I was a little kid, I've always been curious about what can you do to make something better. Basic research has been a history of Mayo's since they started back in the day of finding discoveries for the treatment of arthritis.

That continues today as Mayo looks for new inventions and new drug therapies for the care of patients, and sometimes, as a pharmacist, we're asked to come up with new formulations to help a physician administer a drug to a patient in a new way or a different way that hasn't been discovered. So that's an approach that, again, collaborating with physicians to help the advance of health care and patient care down the road.
