Intro with music	GIVING YOU THE EDGE ON HEALTHY LIVING, HERE'S MAYO CLINIC'S MEDICAL EDGE.
	WHILE MENOPAUSE MARKS THE END OF MENSTRUAL PERIODS, IT'S NOT UNCOMMON FOR WOMEN TO EXPERIENCE BLEEDING AFTERWARDS. HOWEVER, ANY AMOUNT OF BLEEDING OR SPOTTING AFTER MENOPAUSE IS NOT NORMAL.
Rosalina Abboud, M.D.	"MOST OF THIS USUALLY IS DUE TO THINNING OF THE LINING OF THE UTERUS. AND OTHERS ARE DUE TO SOME BENIGN GROWTHS, LIKE POLYPS. "
	OR, IT COULD BE DUE TO AN OVERGROWTH OF THE LINING OF THE UTERUS. AND THE CONCERN

	FOR THE OVERGROWTH EXPLAINS MAYO CLINIC DR. ROSALINA ABBOUD IS...
Dr. Abboud	“IF THERE ARE SOME ATYPICAL CELLS THAT ARE FOUND ON THIS OVERGROWTH, THEN IT CAN PREDISPOSE FOR CANCER.”
	ONE IN TEN WOMEN WITH POST MENOPAUSAL BLEEDING HAS AN OVERGROWTH OF THE UTERINE LINING. AND ANOTHER ONE IN 10 WILL HAVE UTERINE CANCER. THAT’S WHY EVALUATION BY YOUR DOCTOR IS NECESSARY AS SOON AS POSSIBLE. EARLY DIAGNOSIS GIVES THE BEST CHANCE OF CURE.
	FOR MORE INFORMATION, TALK TO YOUR DOCTOR OR VISIT MAYOCLINIC.ORG. I’M VIVIEN WILLIAMS.
