Watch Mayo Clinic Grand Rounds Presentations

Mayo Clinic [Grand Rounds presentations](#) are available online. Visit the [Medical Professionals](#) section of the [mayoclinic.org](#) Web site to access the listing (under Education). New presentations will be posted regularly and new additions will be highlighted in this newsletter.

Flexible Endoscope for Zenker's Diverticula

The most common treatments for Zenker's diverticula (ZD) are open surgical diverticulectomy with or without cricopharyngeal myotomy and rigid endoscopic myotomy. Recently, cricopharyngeal myotomy using flexible video endoscopes has been described as a treatment option for symptomatic ZD, especially for elderly patients.

Nephron Sparing Surgery

Nephron sparing surgical techniques are recommended for small renal cortical tumors up to 7 cm in diameter. New data suggest an improvement in overall survival and equivalent cancer-specific survival for patients with renal tumors plus other health issues related to chronic kidney disease.

[Learn more and view video discussion](#) with Michael Blute, M.D.

Single-incision Total Colectomy Performed

In a landmark surgery, a single 3 cm incision made around the navel allowed a camera and laparoscopic instruments to be inserted via a multiport trocar to extract the colon. It was the only incision made for a complex surgery in which the right colon, transverse colon and descending and sigmoid colon were removed, and the patient's small bowel was joined directly to the rectum.

Minimally Invasive Esophagectomy Reduces Trauma

Encouraging results from Mayo Clinic researchers indicate that minimally invasive esophagectomy, in which laparoscopic and thoracoscopic tools are used for visualization and resection is a viable alternative to open surgery. Mayo is one of a few centers to offer the new approach and reports a mortality rate of less than 3 percent.

Research

Dramatic Outcomes in Prostate Cancer Study

Two patients whose prostate cancer was considered inoperable are now cancer free. In a clinical trial of the immunotherapeutic agent MDX-010 or ipilimumab, the experimental drug therapy, used in combination with standardized hormone treatment and radiation therapy, initiated the death of a majority of cancer cells and caused tumors to shrink dramatically, allowing surgery. In both cases, aggressive tumors had grown well beyond the prostate into the abdomen.

Fracture Risk Following Bariatric Surgery

Mayo Clinic researchers report that patients who undergo bariatric surgery may have an increased chance of experiencing broken bones. [Learn more and view video discussion](#) with Elizabeth Chittilapilly Haglind, M.D.

Protecting Kidney Function during Heart Failure

Mayo Clinic cardiology researchers found an alternative slicing of the peptide BNP (B-type natriuretic peptide) in messenger RNA that helps preserve and improve kidney function during heart failure without affecting blood pressure. Earlier variations of this peptide caused blood pressure to drop, limiting the potential benefits to the kidneys. [Learn more and view video discussion](#) with Robert Simari, M.D.

Education

Transform: A Collaborative Symposium on Innovations in Health Care and Health Care Delivery

Sept. 13-15, 2009

Be part of the solution and connect with thoughtful colleagues from inside and outside the health care industry. Discover new models of care that will transform the experience and delivery of health care in the 21st century. Presented by Mayo Clinic Center for Innovation. Location: Rochester, Minn.
