Atopic Dermatitis

Your Result

This test did not identify variants in the FLG gene associated with an increased risk of atopic dermatitis or ichthyosis vulgaris.

Typical Risk

Here's What You Need to Know

This test did not identify a variant in the FLG gene. View the list of genetic variants we test.

Even though this test didn't identify any variants, there's still a chance that you could have a different variant in FLG or other genes associated with atopic dermatitis or ichthyosis vulgaris.

If you have a personal or family history of atopic dermatitis, you may have other factors that increase your risk. Learn more.

Click on the factors below to see how they are associated with atopic dermatitis:

- Exposure to secondhand smoke
- Living in urban areas
- Attending child care

Many people with atopic dermatitis have family members with allergies and asthmas.

Here's what you can do

1. For most people, there is nothing you need to do based on test results.

2. If you have concerns about an ongoing skin condition, talk with your health care provider.
