Research

[AI-enabled ECG model accurately predicts the age of most subjects](#)

Researchers report that differences between a person's age in years and biological age, as predicted by an artificial intelligence (AI)-enabled electrocardiogram (ECG), can provide measurable insights into health and longevity.

[AI-enabled ECG aids identification of hard-to-recognize asymptomatic low ejection fraction](#)

An artificial intelligence (AI)-enabled electrocardiogram (ECG) facilitates the diagnosis of patients with low ejection fraction in a real-world setting, identifying those who previously would have remained undiagnosed.
