Patient Care
Pediatric retinoblastoma care grounded in global data and communication

Evidence-based practices and communication are key to pediatric retinoblastoma care. Mayo Clinic physicians work collaboratively with one another, the patient's family and global data to advance care and optimize outcomes.

Research

Negative dysphotopsia rates are lower when a 7.0 mm-diameter optic is used

Mobile app provides reliable alternative to Hertel exophthalmometry
Mayo Clinic researchers used ray-tracing analysis to compare the influence of 6.0 mm and 7.0 mm intraocular lens optic diameters on illumination of the peripheral retina.

Learn more

A simple-to-use mobile application yields reliable, accurate measurements in a timely, efficient manner — and may be a suitable alternative when Hertel exophthalmometry is not available for measurement of globe position.

Ophthalmic irAEs can be treated without discontinuation of life-prolonging ICIs

Ophthalmic immune-related adverse events (irAEs) associated with using immune checkpoint inhibitors (ICIs) are rare, but ophthalmologists need to recognize irAEs and understand their treatment so life-prolonging ICIs can be continued.
