Patient Care

Nonsurgical approaches result in meaningful improvement for patients with Peyronie's disease

Mayo specialists consider three key points when determining optimal treatments for patients with Peyronie's disease: baseline erectile function, duration of symptoms and level of invasiveness the patient will consider.

Research

Treatment sequence improves outcomes for patients with metastatic castration-resistant prostate cancer

Research supports the use of docetaxel before enzalutamide or abiraterone as the primary first line therapy for metastatic castration-resistant prostate cancer.

Percutaneous biopsy aids safe, accurate diagnosis of upper tract urothelial carcinoma

A retrospective review of patients who received percutaneous image-guided core-needle biopsy for diagnosis of upper tract urothelial carcinoma supports that the process is safe and well tolerated by those patients.
