Patient Care

Ankle fracture treatment aims to restore function for individuals of all ages and activity levels
Mayo Clinic treats up to 250 patients with ankle fractures a year. As treatment modalities evolve, orthopedic surgeons take an individualized approach.

Options available for patients with obstructive sleep apnea and PAP therapy intolerance
Mayo Clinic offers upper airway stimulation therapy, oral appliance therapy and the expertise of a sleep surgeon for patients who are intolerant to positive airway pressure (PAP) therapy.

Easily make referrals to Mayo Clinic or access your patients' medical records
Enroll in Mayo Clinic CareLink referring physician portal to make a referral and access your patients' medical records 24/7. CareLink may be accessed on desktop and tablet browsers.

Research

Study suggests overuse of levothyroxine for patients with hypothyroidism
Levothyroxine is commonly prescribed for patients with underactive thyroid glands. Research indicates that the majority of these people were initiated on levothyroxine for mild subclinical hypothyroidism — or no apparent thyroid dysfunction.
